

Flatrack

FLATRACK-MOUNTED ROADWAY DISPENSER

You have a Flat bed Truck with a hook lifting system, then the Flatrack Dispenser is the ideal tool to deploy your temporary roadway and build a 4.20 m x 100 m long (13.8' wide x 328' long of Quick Access) access road in minutes.

Rapid and easy deployment

Only 6 minutes and 2 operators are required to deploy four inter-connected 82' long sections of Mobi-Mat® Quick-Access and build a 328' (100 m) long roadway.

To unroll the mat, the trucker drives in reverse while an operator unrolls the Quick-Access roadway using the wireless remote control.

Flexibility

The Flatrack dispenser complies with Stanag 2413 and is therefore adjustable to any vehicle with an hydraulic hook lift system.

Easy transportation and storage

Once loaded, the Flatrack dispenser can be transported to be operational anywhere you need.

Robust and automated system

Made with high anti-corrosion steel beams, the Flatrack includes stowage enclosures and a wireless remote control to ensure the winding and the unrolling of the mat.

Removable reel

The roadway is wound round a removable beam. When the beam is empty, a new one can be installed on the Flatrack.

Simple operation and maintenance procedures

User and environment friendly
